

SOUTH THAMES GATEWAY BUILDING CONTROL JOINT COMMITTEE

25 SEPTEMBER 2008

SOUTH THAMES GATEWAY BUILDING CONTROL BUSINESS PLAN 2009/2010

Report from: Tony Van Veghel, Director, South Thames Gateway
Building Control Partnership

Summary

The report sets out the initial proposals for the South Thames Gateway Building Control Business Plan and seeks approval for the Draft Business Plan to be sent for consultation to Partner authorities.

1. Budget and Policy Framework

1.1 The Constitution states that before 1 October each year the Joint Committee is required to approve and send its draft Business Plan for the following year to each Partner Authority for comments.

2. Background

2.1 The Joint Committee's Constitution sets out the process for approval of the Partnership's Business Plan each year and the timing required to ensure that each Partner Authority is able to incorporate associated budget requirements into the financial planning process for the subsequent year. The stages to this process are as follows:

- Before 1 October each year the Joint Committee is required to approve and send its draft Business Plan for the following year to each Partner Authority for comments
- Each Council has 35 days (from receipt) to provide comments to the Secretary of the Joint Committee on the draft Business Plan
- The Joint Committee is then required to meet to consider any comments received and agree any revisions to the draft Business Plan.
- By no later than 5 January the Joint Committee has to send a revised draft to each Partner Authority for their final approval.

- Each Partner Authority must advise the Secretary to the Joint Committee whether it approves or rejects the revised draft Business Plan by no later than 10 days before the Annual Meeting of the Joint Committee (The Joint Committee will formally adopt the Business Plan at its Annual meeting).
- 2.2 There are also provisions in the Constitution of the Joint Committee stipulating the process and timescales for agreeing amendments to the Business Plan during the course of each year.
- 3. Business Plan 2009/2010**
- 3.1 The business plan outlines how the building control function will be delivered for the three partnership Councils over the next financial year.
- 3.2 It includes details of the statutory and discretionary functions to be carried out together with a list of priorities that will need to be addressed throughout the year.
- 3.3 It includes details of the business and marketing objectives identified as necessary to take the Partnership forward together with details of the performance standards that will be met during the year. There are a number of planned improvements detailed to engage a wide range of customers and designed to deliver an improved service and encourage market growth.
- 3.4 One of the aims of the Partnership was to set up a consultancy to fully utilise the skills, expertise and development potential of staff as well as being able to offer a wider range of construction related services to our customers. The plan includes objectives which will examine the legal requirements, risks and opportunities of such a proposal. However, in our initial discussions with clients, developers and contractors it is clear that they expect their building control provider to be able to assist them in complying with the very complex requirements now necessary to cut carbon emissions, use less energy and reduce heat loss in buildings.
- 3.5 This important work is often done at pre-application stage and in order for us to compete effectively with the approved inspectors we need to be able to offer this service. Until we are able to offer services through the consultancy referred to in 3.4 we need an alternative mechanism which would allow us to bid for work offering a competitive alternative to the private sector. Without this we will lose work in the residential and commercial sectors.
- 3.6 It is possible to offer this service for the benefit and welfare of the community under the powers of the Local Government Act 2000. . Section 2 of the Act provides local authorities with a power to take any steps which they consider are likely to promote or improve the economic, social or environmental well-being of their local community,

subject to the restrictions contained in section 3. This section prevents local authorities from using the power in section 2 to raise money. In order for the Partnership to be able to operate in this way the Joint Committee would need to approve the undertaking as the Partnership does not have delegated powers under the Local Government Act 2003.

4. Financial Implications

- 4.1 Section 6 of the Business Plan details the budget for 2009/10 and targets a surplus of £30,691 for the financial year. This includes contributions payable by the constituent authorities that will be ratified by their acceptance of the Plan.

5. Legal Implications

- 5.1 Where appropriate these are set out in the report and in the Business Plan. The Business Plan makes provision for partnership working with private architects. This will be done under the recognised Local Authority Building Control Partnership scheme.

6. Recommendations

- 6.1 That the Joint Committee approves the Business Plan for consultation as set out in the summary of this report.
- 6.2 That the Joint Committee approves the Partnership undertaking consultancy work on the basis set out in section 3.6 of this report.

**SOUTH THAMES GATEWAY BUILDING CONTROL
PARTNERSHIP**

DRAFT BUSINESS PLAN 2009/10

Foreword

Comment from Chair of Committee:

DRAFT

SOUTH THAMES GATEWAY BUILDING CONTROL PARTNERSHIP

Business Plan 2009/2010

1. INTRODUCTION

- 1.1. Our second full year of trading finds us in a paradox of opportunities and threats. On one hand we have the government's commitment to new homes signed up to the code for sustainable homes, the opportunities the Olympics are bringing to the area together with the improvements to the infrastructure giving excellent communication links to the capital. The 'Building Schools for the Future' programme and the pressure to provide more affordable housing.
- 1.2. Against this we have the effects of the credit crunch. According to the Federation of Master Builders construction orders have plummeted into the red for the first time since Spring 2006. Builders expectations are subdued across the board with the housing sector the worst hit with double digit negative balances reported in the second quarter of 2008.
- 1.3. We therefore need to see where we can maximise our return on our resources and use or develop the skills within the Partnership to open up new income streams to augment the traditional fee earning side of the business.
- 1.4. We are looking to develop a consultancy so as to tap into the construction industry's increase in demand for energy calculations, certification and expert advice.
- 1.5. We need to consolidate our position in the domestic market to see where we can improve the service still further to ensure we meet all customer expectations and remain cost effective in this resource hungry aspect of the work.
- 1.6. We need to win more work in the commercial sector. Many large projects have not been shelved but have a consequential higher degree of competition for the work. We need to make sure we are able to offer the full range of services to these developers with "add-ons" that only local authorities can provide such as a one stop shop, development team approach and local knowledge and expertise.
- 1.7. A difficult time for a fledgling company to survive? Or an opportunity to prove that the resilience and robustness of the Partnership can survive the troughs as well as exploit the peaks of an ever changing construction industry?
- 1.8. Without the call on resources that the Partnership is now able to make, the smaller individual units would not have been able to deliver a satisfactory service given the effects of leave, long term sickness, maternity leave and training on a small team's make up.
- 1.9. A very successful "awayday" laid out the aspirations and aims of a very enthusiastic team who have recognised the benefits of coming together for

DRAFT

both customers and staff alike. The issues staff and customers raised have formed the basis for the priorities of the business plan 2009/10.

2. AIMS AND OBJECTIVES

2.1. In June 2008 an awayday was held for all staff to discuss and contribute to the proposed business plan for 2009/10. Members of the management team led discussions on varying topics aimed at taking the Partnership forward. It has always been fundamental that staff are the groups greatest asset and all are encouraged to take an active part in making the business a success.

2.2. At the end of the session we were left with a number of aims and objectives for the Partnership to aspire to in 2009/10 and they form the basis of the business plan.

2.3. The aims fall into five main areas: Operation, Finance, Staff, the way forward, outside influences.

2.4. *Operation:*

2.4.1 There are still a number of concerns regarding differing interpretation of regulations and inconsistencies when dealing with our regular customers. Although many areas have been addressed at monthly technical meetings it is impossible to cover every eventuality concerning similar applications and whilst it will take a number of years to develop policy and understanding on each facet of the Regulations there are some actions we can take to minimise the impact on customers, in particular our regular agents.

2.4.2 We will list the most valuable agents in each area and allocate them to key account holders (as suggested in the marketing strategy). Whilst they may not wish to participate in the LABC partner authority scheme similar principles can be applied by us as the 'contractor' to ensure a single point of contact for the architect.

2.4.3 There are a number of issues around site meeting arrangements especially with regard to the cost of lost travelling time for surveyors journey times from Swale and Gravesham to the new office of around 30-45 minutes multiplying this by the number of surveyors clearly indicates an unacceptable cost to the Partnership.

2.4.4 Better use of ICT to resolve remote working/home working will allow for a change in working practices so that area surveyors would only need to call into the office two or three times a week. Output on site inspection would increase, the customer would see an even better service and savings estimated at around £30k in unproductive time could be made by the Partnership.

2.5 *Finance:*

2.5.1 For the Partnership's success to grow we must constantly look at ways of increasing income and reducing costs to ensure we remain competitive.

DRAFT

- 2.5.2 It is important that we engage with clients early on in the design stage as our competitors do. In order to meet some of the promises to reduce carbon dioxide emissions by 2020 the Government have introduced challenging requirements for thermal standards and energy use in all new buildings.
- 2.5.3 The controls over heat loss through the fabric of the building, controlling heat loss through air paths, reducing energy input and finding alternative ways of generating power thus ensuring the construction process is as sustainable as it can be, requires meticulous planning, detailed complicated calculations, close monitoring and validation through inspection.
- 2.5.4 The detailed calculations required to design, substantiate, allow for monitoring and validation are highly complex specialist matters and nationally there are very few fully trained assessors who are able to provide this information.
- 2.5.5 It is clear that clients expect their building control provider to be able to take a lead on this subject and be able to furnish them with both advice and the required calculation to satisfy the requirements.
- 2.5.6 Whilst many lead authorities are training staff to check these calculations when they are submitted or paying for consultants to check them on their behalf, the Partnership needs to be able to provide the same service as its competitors and be able to provide a service dealing with all aspects of sustainability at the design stage.
- 2.5.7 To do this effectively we need to separate designers from those that will be verifying the design and this would mean the formation of a consultancy.
- 2.5.8 It has always been the intention of the Partnership to form a consultancy which would be able to offer a greater range of services to clients over the whole spectrum of construction related activities. We see this as a natural progression in using the skills and expertise of the larger workforce and an opportunity to use those skills to generate additional income which will eventually be able to reduce the contributions for each Partner Authority.
- 2.5.9 It would be possible to operate this service as additional to that required under the Building Act, for the benefit and welfare of the community. However, we would not be able to make a profit as we are governed by the Local Government Act 2000. This will mean that the consultancy will have to run at cost and would need the approval from the Joint Committee to operate under the powers of the Local Government Act 2000. Were we to look to operating the consultancy as a business use, to generate additional income surplus then the consultancy would have to be a separate Local Authority Company (LAC).
- 2.5.10 We are present obtaining legal advice on the requirements of moving the Partnership to a Local authority company. We would then be operating in a different way which would allow for a commercial consultancy area to exist. The legal aspects are a very important part of the investigation into forming a LAC but a completely new option appraisal and business plan would need to

DRAFT

be presented to the Joint Committee and to each Council if that proved to be the route Members wished us to take.

- 2.5.11 However, the same legal investigations should be able to allow us to resolve the viability of any form of consultancy being a commercial LAC of the Partnership and this will be one of our main objectives through 2009/10.
- 2.5.12 We know demand is there from our clients and that our competitors offer this service. We have therefore sought from the Joint Committee separate approval for a non profit making consultancy to be able to operate.
- 2.5.13 We will also be looking to improve our income by successful marketing and business development. We were pleased to report a 3% increase in market share (income) in the first half year of trading and will be looking to hit a 5% increase next year. We are in negotiation with KCC with regard to their schools program where we would be the partner for all applications in Kent. We are also hoping to increase our Partner companies, expanding the client base we currently have.
- 2.5.14 Another way we can influence our financial balance is by making savings. Accommodation costs are a major part of our expenditure, we understand our current accommodation is being sought by a University and we will have to move in order that Medway, our current hosts, can realise the sale of the lease. We will take the opportunity to look at reducing the floor area we require by changing working arrangements as discussed earlier. We will look to move to a single floor arrangement which will make savings on lost space and make consolidation of the two floors more practical.
- 2.5.15 We have already discussed savings in lost time by re-arranging travel to and from the main office, however, there would also be savings in travel expenses as one surveyor would be able to arrange for a more economical route if carrying out site inspections all day. This could save a further £5k per annum on travel costs.

2.6 Staff:

- 2.6.1 In order for professional staff to keep up to date with changes in products or procedures it is important to maintain their individual training needs. One of the sessions at the awayday concentrated on personal development and how individual aspirations and targets dovetailed with those of the business. A separate working party was then set up to design STG's own Personal Development Record (PDR) process with outcomes which tied into business objectives.
- 2.6.2 Consistency of approach is a theme we have carried through from the previous year and looked at a variety of ways in which we can ensure the same approach to builders, architects and owners. We are developing standard amendment clauses which can be used or customised by surveyors so that phraseology can be uniform in our correspondence to the agents.

DRAFT

- 2.6.3 We are also looking at standardising conditions which go onto conditional approvals and standard phrases for site inspections so that drop down menus would make it simple for surveyors to record site visits at the scene. This may allow for the provision of a site report to be provided on site for owners or builders to keep, to track progress or resolve any problems that have been highlighted.
- 2.6.4 The structure chart is shown in **Appendix 3**. Harmonisation occurred ahead of schedule, by April 2008, at the request of Members and Steering Group. It proved an overwhelming success in that despite all the difficulties that staff had to overcome in the early months, everyone has signed up to the new terms and conditions under the harmonisation package.
- 2.6.5 The age profile of the group suggests that we could lose up to 4 staff through retirement in the next three years. It is therefore prudent to introduce the two trainee positions as shown in the structure chart which could be funded from one senior member of staff vacancy. Part of the ethos behind the Partnership was the introduction of enthusiastic students engaged at the lower end of the career grade to ensure resilience within the group. We have also identified the need to recruit, perhaps on a part time basis, a marketing person to assist the administration and business development manager with winning new work. There was the opportunity of securing the services of one of two ex-local authority building control managers to fill this role. However, to date, this has proved unsuccessful with one not coming back into the profession and the other joining the LABC warranty providers in a marketing role. Work will continue to ensure this post is filled within the near future, if necessary on a commission basis.
- 2.6.6 As well as trainees from the formal career grade structure we are also in discussion with other Kent authorities in operating a county wide apprenticeship scheme. This would involve external funding with a minimal input from each authority. This development would ensure further interest in the profession from school leavers and build in further resilience to building control in Kent.

2.7 Outside influences:

- 2.7.1 There are a number of external drivers which will have an impact on the way building control is delivered through 2009/10. The results of the consultation on the Future of Building Control will be acted upon and this will challenge some of the traditional ways in which the service has been delivered by local authorities. In particular a system of risk based inspections is proposed which deviates away from the statutory notifiable regime that currently exists. This will enable the Partnership to better focus its resources on sites which require a close examination and allow a greater freedom in the frequency of inspection where other methods of recording are taken onboard, such as photographs or videos.
- 2.7.2 Another area which will influence service and delivery is the introduction of National Performance Standards. Work with the software provider to automatically generate reports which will populate the performance

DRAFT

measurement data that is required are well underway. The National Performance Standards are reproduced in **Appendix 1**.

- 2.7.3 The third external factor which will heavily impact on the industry is the code for sustainable houses. We already have a disparity on site where affordable homes have to be built to a higher thermal standard than private sector housing. However, the planning demand for new developments to hit level 3 or higher on new sites is bringing up the private sector element, together with consumer pressure to see demonstrable savings on energy costs.
- 2.7.4 Although this presents us with technical difficulties both on plan and on site, it does offer opportunities to sell our expertise in this field to colleagues in planning who are trying to ensure that conditions are met on site and also designers at pre-application stage who are finding it difficult to design details to comply, hence our proposal for a consultancy discussed earlier.

2.8 *Future direction:*

- 2.8.1 We are also buying legal advice from KCC with respect to setting up STG as a Local authority company which would be the next logical step for the Partnership to make. From the outset the Partner Authorities were keen to ensure as much independence as possible, so that STG had a greater deal of flexibility with regard to Local Authority policy and procedures.
- 2.8.2 Whilst we do enjoy some flexibility we are still governed by the policy and procedures of our host authority, Medway. In order to be truly in charge of our expenditure and costs we do require the freedom to select the most affordable and effective support services and this would require us to have the independence of a separate company.
- 2.8.3 We will take the advice and prepare a separate business plan for Members to consider. If it appears that given the economic climate and the age of the Partnership it would not be prudent to move to this arrangement at this time, we could use the same research to apply to an arms length consultancy company which would have the benefit of independence and the ability to trade with a profit as described in 2.5.3.
- 2.8.4 Below is the action plan derived from these objectives.

Objective	Action	Milestone	Outcome
Remote working Full use of tablet pc's on site	Tablet pc's to be able to connect to MIS software from site and home. Full functionality with back office systems.	Link with T mobile achieved by April 09. Training for surveyors completed by June 09. System tested and launched by August 09.	More effective use of resources and improved working practices.
Develop key account holder service.	Identify suitable candidates. Approach regarding LABC Partnering Scheme. Identify demand and	Evaluation of candidates by May 09. Level of service agreed by June 09. Suitable agents signed up between July and	Improved consistency for customers.

DRAFT

Objective	Action	Milestone	Outcome
	link with suitable resources.	Sept 09.	
Increase income generated by commercial works by 10%.	Identify potential leads from planning lists as early as possible. Aggressive marketing for work including discounted fees and improved service delivery. Additional services supplied through consultancy. Matching resources with demand.	Improved communications with internal departments at each authority by April 09. Specific marketing brochure prepared for commercial contracts by June 09.	More sustainable fee income.
Reduce support costs including accommodation by 5%.	SLA's to be continually monitored. Competitive tendering for services. Examine different ways of working to make efficiency savings.	Monthly monitoring of support costs SLA's by April 09. Examine best practice at other authorities by July 09.	Effective budget monitoring.
Staff development to increase enforcement activity by 10%.	Training for staff on enforcement, prosecution and expert witness legislation. Examine use of specialist for enforcement activity. Improved intelligence through better links with other departments.	All surveyors trained in basics of enforcement by June 09. Specialists identified in each team with a performance measurement target by Sept 09.	Greater public protection.
Introduction of an apprenticeship scheme.	Examine potential for different types of apprenticeship schemes. Investigate external funding opportunities. Examine best practice examples for schemes in the construction industry.	Research schemes and select appropriate ones by May 09. Evaluate cost and funding streams by July 09. Discuss application through Kent Building Control by Sept 09.	Building in resilience to the service.

DRAFT

Objective	Action	Milestone	Outcome
Adoption of "Future of Building Control" recommendations	Examine conclusions of consultation documents. Draw up improvement plan for implementation. Adopt new performance standard targets	Examine recommendations by end Apr 09. Draft action plan for adoption by June 09. Apply action plan throughout 2009/10.	Improvements to service and adoption of National Standards.
Develop skills and knowledge of surveyors on sustainable construction issues.	Training for staff on Code for Sustainable Homes. Further training on L1 and L2, SAPs and SBEMs. Project team to be formed to advise on large residential and commercial applications.	All surveyors trained on basic sustainability requirements by end July 09. Project team to be formed by Aug 09. L1/L2 revision training by Nov 09.	Marketing opportunity and better equipped staff to deal with environmental/ sustainable issues.
Investigate opportunity for the Partnership to become a Local authority company.	Legal advice required for development plan. Risk/benefit analysis to be carried out. Staff consultation to be carried out.	Legal constraints to be identified by May 09. Staff consultation through June 09. Risk analysis to be carried out by Aug 09. Business plan prepared if necessary by Oct 09.	Development of Partnership to achieve independence.
Form a consultancy as part of STG or as a separate commercial arm.	Legal advice required for development plan. Market research to determine customer demand. Marketing campaign to advertise services to customers.	Legal constraints to be identified by May 09. Market research to be carried out by June 09. Marketing campaign through June/Aug 09.	Better use of resources and potential income stream.

3. BUILDING CONTROL SERVICES

- 3.1 The main function of the building control service is the checking of building plans, the inspection of building work in progress and appropriate enforcement to ensure all relevant building work complies with the Building Regulations. The majority of plans submitted and building work inspected are altered and amended through the intervention of building control surveyors to achieve compliance with the building regulations. The service therefore provides significant value for us all in achieving minimum standards of health and safety, sustainability, access for all in and around buildings and, importantly, protection through enforcement where necessary.
- 3.1.1 The majority of building projects are required to comply with the Building Regulations 2000 (as amended).

DRAFT

- 3.1.2 The Regulations exist to ensure the health and safety of people in and around all types of building. They also provide for energy conservation and for access and facilities for disabled people.
- 3.1.3 Important examples of health and safety requirements include fire safety (means of escape, fire spread and access for the fire service) structural safety and satisfactory drainage.
- 3.1.4 The primary responsibility for compliance with the Regulations rests with the person carrying out the building work. This will usually be the builder but could also be the building owner or person responsible for having the work carried out. The person carrying out the work will normally require a building control body to ensure Building Regulation compliance.
- 3.1.5 Competition with the private sector has existed for this service in respect of housing since 1985 and from 1997 in the commercial sector.
- 3.1.6 Enforcement of the Building Regulations does not form part of the fee earning service. Enforcement of the building regulations can only be carried out by Local Authority Building Control. Power to enforce has not been given to Approved Inspectors.
- 3.1.7 Local Authorities have a duty to ensure that building work complies with this Building Regulations (Section 91 of the Building Act 1984). If our requests to rectify contravention fail then as a last resort more formal action is used. There are two courses of action available:
 - (1) Prosecution of the builder in the Magistrates Court under Section 35 of the Building Act 1984. In most cases action must be started within six months of the contravention taking place although this was extended in 2008 for offences concerning sustainability issues.
 - (2) Notice under Section 36 of the Building Act 1984 requiring the owner to remove or rectify the contravening work. This Notice must be served within 12 months from the date of the offence.
- 3.2 The Government have stated:
 - 3.2.1 “The Energy White Paper produced by the Government acknowledged the reality of climate change and stated a commitment to putting the UK on a path to cutting carbon dioxide emission by 60% before 2050 with real progress by 2020.
 - 3.2.2 With around half of the CO² emissions coming from building energy use, the Building Regulations are a key part of Government efforts to tackle climate change through higher building standards. DCLG recognise that Building Control professionals are at the fore front of these efforts.”
 - 3.2.3 This key message from the Government and the demand from the construction industry for pre-application advice and discussion means it is

DRAFT

imperative STG invest in training a project team to provide the lead and the service that is required. The project team would consist of five surveyors fully trained as energy assessors able to produce and check the necessary calculation require to issue Energy Performance Certification and SBEM/SAP calculations for both residential and commercial premises. We already have two lead surveyors trained and qualified to take the project team forward.

- 3.2.4 Non fee Earning – there is a large proportion of non fee earning work that is still needed to be carried by the Partnership, which is resourced through the contributions from each Local Authority and equate to about 23% of the Partnership staff time. This includes responding to dangerous structures, demolition notices, monitoring of Approved Inspectors, registration of self certification schemes, general enquiries and pre-application advice.

4. MARKETING AND BUSINESS DEVELOPMENT

- 4.1 At the outset of the Partnership it was agreed that the marketing strategy should focus primarily on the high value, low volume commercial market, ie developers, housebuilders and their professional advisers.
- 4.2 The effects of the credit crunch on the economy has severely hit the housebuilding market. Whilst this was an area we targeted to make gains in, STG already faced significant competition in this area from the NHBC which had the advantage of offering a well established warranty scheme and road bond scheme. The market for housebuilding has shrunk considerably with many schemes being put on hold or shelved for the foreseeable future.

DRAFT

4.3 The commercial sector has not been hit to the same degree but is cautious in how, when and where it builds. The reduction in the market in general has inevitably increased the competition in the areas remaining with Corporate Approved Inspectors offering considerable discounts to win the work.

4.4 *Our Customers*

4.4.1 We have looked at ways that we can improve our market share by engaging our customers to a greater extent. We have a number of diverse customers to service and each can be influenced differently. Our customers and the planned improvement are:

4.4.2 **“Applicants”** – our function is to ensure that their property is constructed in accordance with the Building Regulations. Plans Approval Notices and Completion Certificates are evidence of compliance and are seen as key elements of the process. They are often required when raising finance for projects. Applicants vary widely in nature between members of the public and other Council departments, to businesses and national development companies. Often applicants are having work done for them and therefore have little knowledge of the building control process. Domestic applicants will use the Building Control service infrequently.

4.4.3 **Planned Improvements:** We need to engage with applicants to a greater extent than at present. Domestic applicants may never see us on site and their only contact is to make a request for a completion certificate at the end of the job. We need to ensure they are aware of the negotiation advice and added value that has been brought to the job by using our services. As competition increases a number of smaller AI’s or even some corporate AI’s have moved operations into the Scheme 2 work that has traditionally been Local Authority Building Control territory, eg loft conversions, extensions and conversion of garages to habitable rooms. Similarly, with key account holders it is imperative we keep a good dialogue with major owners who may use the service more frequently, we will therefore be producing interim reports for major applicants to keep them abreast of progress on site and any potential problems that we can assist in resolving.

4.4.4 **“Agents”** – these range from architects and surveyors to builders; they can include other internal sections such as Property Services. They are generally frequent users of the Building Control service and are knowledgeable about the process. Although their knowledge of the Building Regulations is variable, they require clear guidance at an early stage as to how the regulations will affect their proposals. They are increasingly the decision makers when it comes to choice of Building Control service. Accordingly, our marketing initiatives focus on this group.

4.4.5 **Planned Improvements:** As these are often responsible for choosing the Building Control service for clients they are a most important group. We have done a lot of work in increasing the number of partner architects from two to eight currently, and are hoping to increase this figure still further with our local agents. However, we can also provide similar facilities to the levels of service

DRAFT

the partner companies enjoy, ie key account working with one or two surveyors, a more consistent approach, offers of joint training with our own staff etc to selected agents to ensure they receive the highest level of service in both quality and speed of response. We will therefore be selecting a number of key accounts, with individual contact, joint training and seminars (on changes to legislation or new products), focus groups, CPD club, to ensure they stay within the service.

- 4.4.6 **“Builders”** – the main contact on site for the Building Control Surveyor is the builder. Again, their knowledge of the Building Regulations is variable. The key issues for the builder are speed of response and clarity from the Building Control Surveyor on site. They often ask for a flexible and reasonable approach to be taken.
- 4.4.7 **Planned Improvements:** As these are the people that will produce the finished product, it is important to establish a good working arrangement on site. Costly delays in waiting for our approval of something on site could be a major factor in deciding whether to use us again or not. It is important then to ensure a speedy response for requests for visits on these major sites. Alterations to our working practices allow for visits any time during the day and with major projects weekend or evening calls. Site record books will be introduced so that a copy of the surveyors inspection report is on site at all times so that if necessary the builder can refer back to identify any necessary work and introduce a greater degree of clarity to the situation.
- 4.4.8 The regulations today are ‘functional’ and not prescriptive. For many years local authorities have been accused of being too prescriptive and inflexible when using new products or procedures. It is therefore important that they are up to date with products and process available to ensure compliance and it is proposed to have joint seminars with builders to ensure everyone is comfortable with how products can be used on site.
- 4.4.9 **“Developers”** – companies who undertake building work on a commercial basis at regional or national level. They often require a responsive service with uniformity of interpretation. These companies are often the ones who are given the choice of which Building Control service to use by their clients. The development market is highly competitive and often developers are working to very tight budgets and timescales. They increasingly wish to work in partnership with providers of other services such as Building Control.
- 4.4.10 **Planned Improvements:** Developers encapsulate all of the above. They have tight budgets and timescales with penalties to pay if they don’t meet them. They require good feedback and clarity of situations as they are presented on site. We will be offering pre-application advice for free, use of the consultancy service at least to provide SBEM or SAP calculations and other expertise such as structural engineering and means of escape. We will meet to discuss their programme of works and advise of an inspection regime and fee payments to suit the programme. One area of work we are losing at present is the Design and Build market, where one company carries out these functions and is often tied to an Approved Inspector and we therefore

DRAFT

lose any opportunity to bid for the work. We will therefore be targeting Design and Build companies as a potential growth area in 2009/10.

4.4.11 These customers require:

- Good communication at an early stage before a Building Regulation application is made in order to speed up the process.
- Commercial confidentiality
- Access to other Council sections through the Development Team Approach
- Good value for money – the cost of making a Building Regulation application is one of the key factors in choosing which provider to use.
- Uniformity and consistency of interpretation of Regulations.
- A flexible approach within the scope of the Regulations.
- A single point of contact for different projects.

Perhaps a key thing to remember here is that all these customer groups prefer to be helped in achieving compliance with the regulations through interpretation and communication rather than enforcement. This is a key work ethic of the STG.

4.4.12 **“The Public”** – maybe not direct users of the service, and whilst most will not be fully aware of the Building Control process, they will expect the Councils to act in their interest to ensure safe buildings and to deal with dangerous structures. They will often confuse the Planning and Building Control processes. Members of the public are often surprised to learn that Building Control is subject to private sector competition, particularly those who have bought a new house and have problems and find out that another provider has carried out the Building Regulations inspections.

4.4.13 Our continued good working relationship with the Planners forms an integral part of our marketing intelligence and a formal ‘presence’ in each of the Partner Authority’s main reception is extremely important in demonstrating our links to each authority and service to the community.

4.4.14 It is important that this group are made aware of how STG delivers the essential elements of public safety for all three authorities. We have publicised our functions through the local press in an article available throughout the area. However, we need to do more in the free press, at each Council’s reception and on the website in order that the general public are aware of the Partnership and its public protection duties. We will therefore have further press releases in 2009/10 and produce an end of year report which will be freely available at each Council’s receptions. We will advertise our services through each Council via reception or other service contacts, ie Planning, Trading Standards and Environmental Health. We are further improving the website to make it more user friendly and will be introducing access to application information on line through 2009/10.

DRAFT

4.5 Market Environment

4.5.1 Trading conditions have been the most challenging in the last eight months and with the current downturn in the housebuilding market, and the uncertainty in the construction industry in general, competition for Building Control services is becoming increasingly challenging.

4.5.2 With the UK facing a serious risk of recession the larger construction companies are struggling and have reacted by moth balling sites throughout Kent. Given the significantly weaker trading environment that we have experienced this year and the continuing uncertainty over the outlook for the rest of 2009/10, we have taken significant action to restructure our business to address the changed conditions in which we operate and to optimise our position for when market conditions improve. This is to ensure our business is of the correct scale to be in line with our expectation of a weaker market.

4.5.3 The actions we have taken include the following measures:

- removing area 5 and reallocating staff and redefining area boundaries
- investigated potential for consultancy
- investigated and initiated Continuing Professional Development (CPD) for surveyors along with partners/agents with potential to recover part of costs
- investigating potential to employ trainees using apprenticeship scheme
- appraisal of current fee structuring

We believe these actions will ensure that STG Building Control is best placed to meet the challenges of the current market and to react to any change of conditions in the future.

4.6 Competition

4.6.1 A key difference that we have experienced during the current downturn has been that all the Approved Inspectors are experiencing similar trading conditions at the same time. Pressure on volumes, prices and an increase in sales and marketing costs has been experienced by all our competitors.

4.6.2 This is unusual, as normally one company at a time would be aggressively targeting an area on schedule 1 work. The reality is that the Approved Inspectors are struggling and are now seriously targeting schedule 2 work to maintain their businesses. The number of applications received by individual Approved Inspectors can be seen in **Appendix 2**.

4.7 Market Share

4.7.1 The graph below shows the number of applications received from five of our competitors over the last ten months. There are presently over 30 Approved Inspectors actively working with the STG area. We have therefore shown the top five of these Approved Inspectors. These approved inspectors have consistently submitted applications each month for work in the area.

DRAFT

4.7.2 The chart below shows the number of applications received within each area and shows where the Approved Inspectors are targeting.

Approved Inspector applications by Area - October 2007 to July 2008

4.7.3 The key advantage we have over the Approved Inspectors is enforcement, as we are solely able to carry out this function and receive any potential fees. Investigation is currently under way to set targets for potential regularisation work based on number of individual surveyors within areas.

4.7.4 With schedule 2 work being targeted by our competition in Area 3 and Area 4, we need to maintain communication with our builders and architects within these areas to ensure future work is submitted to STG Building Control and with the planned improvements previously described intend to maintain our market share dominance in this sector.

DRAFT

4.8 *Marketing Mix*

- 4.8.1 The current economy has resulted in a downturn in house building (schedule 1 work). We therefore need to focus on schedule 2 and 3 work. This work relates to extensions, loft conversions and alterations within the residential area as well as the commercial market.
- 4.8.2 With house builders being hardest hit at the present time this we feel is slowly progressing down to other areas of the commercial market. The domestic and commercial markets are therefore seen as optimum areas for potential increase in market share. Though many residents will refrain from expenditure there are always a percentage that can or require to expand their property if unable to move. It is important to continue to win the high market share in this sector. However, fiercer competition for work also drives down prices in the construction industry making it practical for many commercial companies to expand their business opportunities by building at this time.
- 4.8.3 Currently we are reviewing our fees against those within Kent. At present we are placed mid-range but are looking to increase our schedule 2 fees to reflect the present market value.
- 4.8.4 Work within this schedule is very costly because of the high number of inspection visits and the differing degrees of expertise in plan preparation and works on site. Given the increasing complexity of the Regulations the time and therefore cost of checking each application has increased.
- 4.8.5 However, with regard to the commercial work in Schedule 3 we will be introducing fee discounts based on the more realistic costs of plan vetting and site inspection based on schedules of work, work programme and the competencies of contractors on site.

4.9 *Advertising*

- 4.9.1 Breaking out of the mould of local authority building control has required us to market ourselves. Currently we have run advertisements in:
- Construction National - May 2008
 - REHAB –February 2009 (charitable)
 - Thames Gateway – March 2009
 - SEEDA – March 2009
- 4.9.2 Both the Thames Gateway and SEEDA enable us from March 2009 to upload news items weekly to their website which are automatically sent out to their client list weekly.
- 4.9.3 Our website is still being improved to enable us to have greater control with the potential to upload news items weekly.

DRAFT

4.10 Signage

4.10.1 Site signs have been produced which are currently displayed on the following sites:

- Springhead development, Northfleet
- Medway Hospital, Chatham
- Morrison's, Swale

Displaying these signs will ensure STG is associated with the large commercial sites with each of the authorities it covers.

4.11 Event Marketing

4.11.1 On 24 September 2008 we will be attending the Construction Expo 2008 at the Dockyard. This event is attended by many of the organisations we are looking to work more closely with. It is also attended by our competitors and therefore we need to actively market ourselves on the same level.

4.12 Seminars

4.12.1 Having researched our architects on building control requirements during July and August, we have initiated seminars. The first of these seminars will be held on 15 October 2008 covering Acoustics. After this we have planned seminars on:

- Contaminated Land for the benefit of our partners at each authority as well as our own surveyors.
- Sustainability.

4.13 Business Development – Alliances

4.13.1 Since October 2007 we have increased our partners to 9. We are hoping to increase our partners through the seminars, though many within the Swale area have indicated that they will be submitting to STG and therefore do not need to partner. We will however continue to pursue these avenues.

4.14 Planning Lists

4.14.1 Reviewing the weekly planning lists for each authority we are currently writing to all those who require building regulation consent and enclosing the necessary paperwork. For the larger sites our brochure information pack is forwarded and personal contact is made.

DRAFT

4.15 Marketing Objectives

4.15.1 Below is the action plan of these objectives.

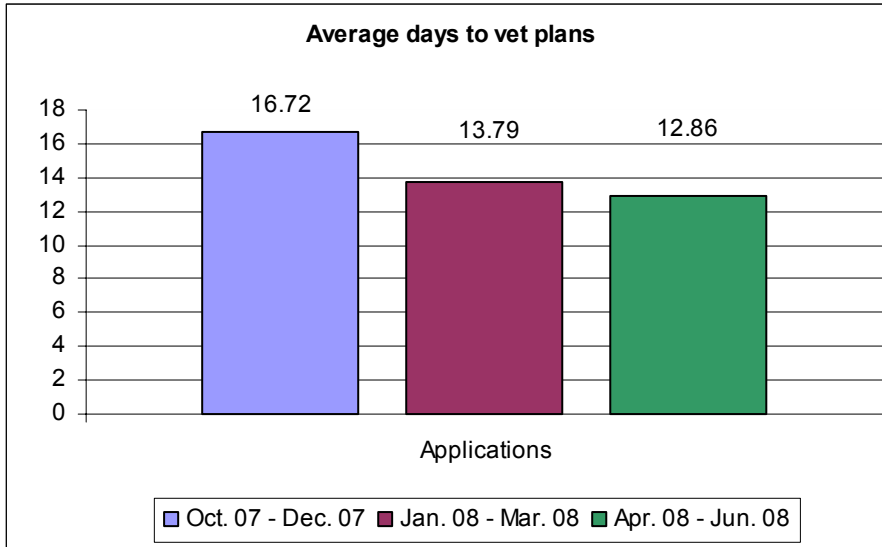

Objective	Action	Milestone	Outcome
Increase liaison with planners at three authorities	Contact senior planners with view to attending regularly meetings.	Increased contact by March 09	Develop of in-roads into pre-application advice.
Production of reception packs	Provide packs of paperwork and basic question sheets for receptions at each authority.	All receptions conversant with new setup and paperwork by June 09.	Maintain presence and service.
Give talk on STG partnership at Gravesham council staff talks	Identify suitable date and provide partnership talk with Paul Newton.	Gravesham staff updated on partnership by June 09.	Re-enforcement of service.
Develop seminars for partners and agents	Identify suitable course topics and demand.	Provide courses by March 09	Develop as key source of training and potential income stream.
Liaise with development group for each authority	Establish contact to investigate potential future working	Meet with all three development agencies by June 09	Development of potential joint working
Production of quarterly newsletter	Identify relevant articles of inclusion and distribution to partners, agents and planners at each authority	Production of newsletter by June 09	Maintain presence.
Advertise in high-profile construction magazines	Identify suitable magazines for advertisement and editorial	Produce editorial by April 09	Compete with Approved Inspectors in high-profile literature.
Attend construction exhibition	Identify suitable exhibition	Attend by October 09	Maintain presence and develop contacts
Develop website to enable upload of news items	Establish medium to upload current large site completions and news worthy topics.	IT constraints to be identified by Dec 09 and rectified by March 09.	Become site for current and technical advice.

5. PERFORMANCE MANAGEMENT STANDARDS

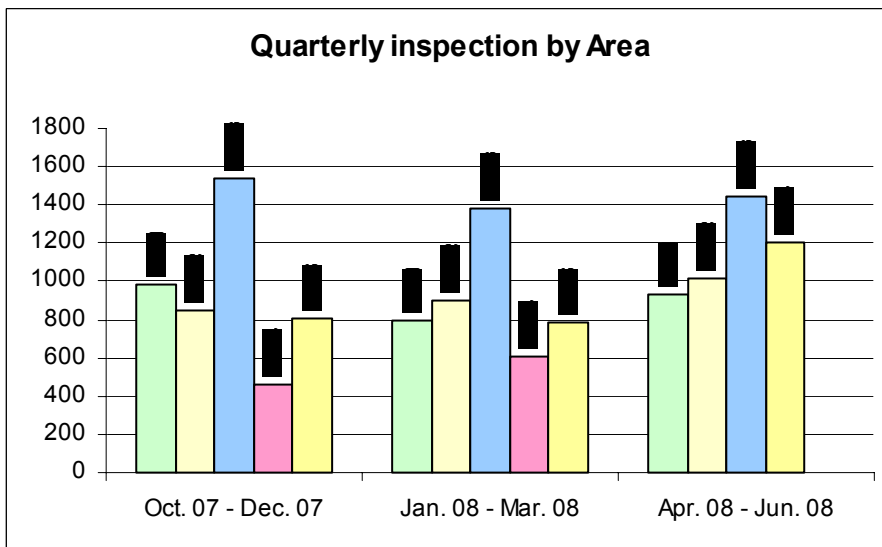

5.1 Monthly Steering Group meetings monitor the performance of the Group against a number of targets devised to test customer satisfaction. As from 2009/10 the final building control standards document as shown in Appendix 1 will be adopted. However, we will still use local indicators where they are appropriate to measure clients needs. In previous customer surveys carried out by Kent Building Control the two most important aspects of the service

DRAFT

were the speed of checking applications and the response to requests for site visits. The first two indicators therefore reflect applications checked within 10 and 15 working days and responses to requests for visits. The graph below indicates the improvements to service over the last three quarters we have achieved and the average time taken to check applications. With the proposal to apply some of the principles of the partnering scheme to selected practices to generate a good deal of income to us through their local applications we expect to see further improvements to this through 2009/10 and we will be looking to improve on the adopted building control standards of 100% of plans checked within 15 working days.

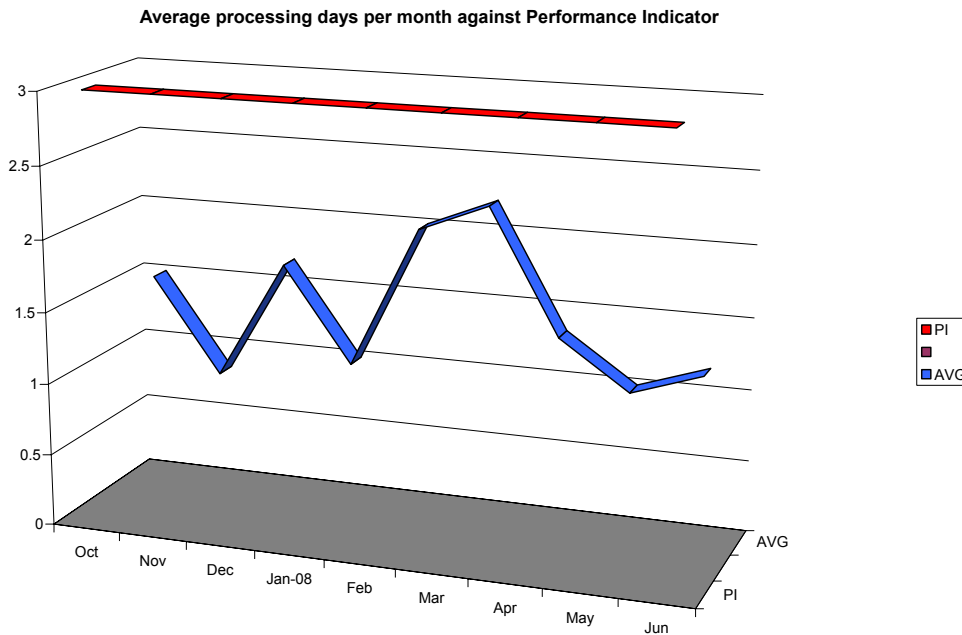

5.2 With regard to site inspections we have continued to offer the same day service when notified before 10am. However, there has been a significant take up of the improved service we now offer regarding early morning visits. In response to this we now assure customers of those early morning visits when notified by 4pm the previous day. The statistics for the last three quarters for site inspections over the four areas are shown below:

DRAFT

5.3 It was also identified in the surveys that customers wanted an early acknowledgement of their application and details of the next process and who was dealing with it. This has been addressed through our acknowledgement letter and a target time of 3 days given to the technical assistants to validate the application and respond to the agent or owner. The graph below indicates the average processing time against this performance indicator over the last three quarters. This demonstrates that we have achieved 100% in this performance indicator.

5.4 Another important client group that requires responses in set time limits are solicitors and conveyancing companies dealing with house sales. The introduction of Home Improvement Packs has increased the demand in this area. As this was a new service in 2008/09 we set a target of 10 days for responses. The graph on the next page indicates performance against that target where we have achieved between 82% to 100%.

5.5 Benchmarking

5.5.1 Local Authority Building Control has been working with the Audit Commission to produce performance indicators for building control and these are reproduced in Appendix 1. However, because of the competition element to the service and the vast range of duties, local authority building control units carry out, it has not been possible to produce a set of indicators which can easily be benchmarked against.

DRAFT

In order to address this balance the Quality Performance Matrix has been introduced. The matrix looks at nine key areas:

- Enforcement and complaints
- Quality Management and Financial
- Accessibility of the service
- Customer communication
- Service initiatives
- CPD, staff training and qualifications
- Consultation, assessment of plans and archiving records
- Site inspection, completion and archiving of records
- Review of overall performance.

The Partnership is reviewing its operation against each of these criteria through 2008/09 and the resultant score out of 100 will enable a benchmark to be set which can be compared to other Partnerships or highly ranked local authorities throughout the UK.

DRAFT

HIP processing

	October	November	December	January	February	March	April	May	June
■ AVG days	5.6	1.0	1.0	0.4	5.0	1.5	2.7	3.2	2.1
■ No apps received	35	79	31	60	41	27	47	31	44
■ No apps < 10 days	29	77	30	59	34	27	43	27	42
■ No apps > 10 days	6	2	1	1	7	0	4	4	2
■ % responded < 10 days	82.86	97.47	96.77	98.33	82.93	100.00	91.49	87.10	95.45
■ % responded > 10 days	20.69	2.60	3.33	1.69	20.59	0.00	9.30	14.81	4.76

5.6 As part of our performance measurement with regard to marketing our aim from the previous business plan was to increase the income share by 5%. Details of the last three quarters showing both the numbers of applications and the market share are shown below. The benchmark when the Partnership was set up was 71% market share by income and we are on course to hit our target of 76% for 2008/09. However, the economic climate described earlier has meant a far more aggressive market exists for competition with the Approved Inspectors and therefore for 2009/10 we will be aiming for a market share of around 78%.

DRAFT

6. FINANCIAL ARRANGEMENTS

- 6.1 Below is the forecasted budget for April 2009 to March 2010.
- 6.2 The harmonisation costs are now included in the salary budget for a full year with an assumed 2.5% increase for cost of living.
- 6.3 The Service Level Agreements for support costs are based on 2008/09 figures with a small uplift as service providers are not in a position to be definitive on hourly costs etc for 2009/10 as we are only four months into the financial year at the time of writing.
- 6.4 The expected income is based on proposed changes to the local authority charges scheme which the Director has delegated powers to adjust.
- 6.5 Schedule 2 work (domestic extensions, loft conversions etc) is the most expensive for us to service and generates around 45% of our income. In order to recover our costs we will need to increase fees in this area by around 5%.
- 6.6 It has become very competitive in the commercial sector which is where the Approved Inspectors focus their work. We have found examples of Approved Inspectors undercutting the model fee guide operated by local authorities by as much as 55%. We will be altering the scheme to allow us more freedom to negotiate and more flexibility to set a price on work in this area.
- 6.7 There is, of course, a massive downturn in Schedule 1 (new housing) with competition between corporate Approved Inspectors accelerating and a number challenging the NHBC's grip within this area. Many housing sites have been mothballed until a recovery emerges. We will continue to market ourselves in this area and it is not proposed to alter the fee schedules at this time.
- 6.8 In response to architects' comments we intend to alter the charges scheme to allow for discounts on sites where multiple works are carried out.

DRAFT

		Apr 09 – Mar 10
Direct Costs		
Staffing		1,536,950
Premises		98,450
Transport		62,671

Apr.-Jun.	£39,550.61	£38,750.00	£159,544.56	£142,000.00	£187,224.33	£159,686.00

DRAFT

6 Conclusion

6.1 The awayday provided the opportunity for all staff to focus on the needs of the Partnership and how each person could contribute to its success. Presentations from each workshop were remarkably consistent on the benefits joint working had brought and the opportunities it gave for improved customer service and business development for the future.

6.2 Below are the goals the team expect to achieve by march 2010 with the support and direction of the business plan.

<u>Goal</u>	<u>Development path</u>
<ul style="list-style-type: none">• Consultancy	To use and develop the skills and expertise within the group to deliver a wider range of services and generate additional income.
<ul style="list-style-type: none">• Apprenticeship	To introduce enthusiastic apprentices and trainees to ensure resilience within the service.
<ul style="list-style-type: none">• Local authority company	To investigate and develop a business case for STG to have its own identity and to operate more freely.
<ul style="list-style-type: none">• Marketing	To increase market share of commercial projects through the involvement of a dedicated marketing position.
<ul style="list-style-type: none">• Accommodation	To be relocated to a single floor office with medium to long term security through formal leasing arrangements.
<ul style="list-style-type: none">• Staff Retention	To retain staff and develop individuals to their full potential through the PDR process and mentoring support.

Message from Angela Smith and Edwina Hart

The Building Regulations aim to ensure the health and safety of building users, promote energy efficiency, facilitate sustainable development and contribute to meeting the access needs of disabled people. They provide a framework of flexible functional requirements within which buildings can be designed and constructed. The role of building control is to help ensure that all relevant building work accords with these objectives, but at the same time this service should be effective, efficient and minimise cost and delay for those carrying out such work. This document is about how building control providers can work to deliver these objectives and recommends standards of performance.

Since the introduction of Performance Standards in 1999, Building Control Bodies have incorporated them into their day to day working practices. Performance Standards are of increasing importance as the need for compliant buildings rises to match public expectations and the demands of public policy in relation to the performance of buildings.

We are grateful to the members of the Building Control Performance Standards Advisory Group, working under the Chairmanship of Michael Finn, for their hard work in revising and updating these standards and guidance. We also particularly welcome their key role in the development of Performance Indicators, launched in parallel, applying across the private and public sectors. We hope their efforts will be rewarded by Building Control Bodies delivering a high quality of service to customers.

These initiatives aim to build delivery excellence into the building control process and assist Building Control Bodies to monitor progress towards that end, particularly with regard to self-review and continuous improvement. We commend these initiatives to their attention.

Welsh Assembly Government
June 2006

Foreword

Before 1997 there were only two bodies operating in the Building Control arena in England and Wales: Local Authorities, consisting of approximately 400 Councils, and NHBC Building Control Services Ltd an Approved Inspector.

In the face of emerging competition the associations representing Local Authorities developed a model policy and level of service document which was adopted by most Councils. The operations of NHBC Building Control Services Ltd. were governed by policy guidelines endorsed by Ministers of the day at the time the company was approved.

January 1997 saw choice widened considerably with the approval of many more Approved Inspectors and from April 1999, Councils were authorised to set their own fees for carrying out the Building Regulation function. In the light of these and related developments it was considered that the time was right to develop an Industry wide agreed set of Performance Standards under which Building Control Bodies (“BCBs”), public and private sector, could offer competing services and against which all could be measured.

With encouragement and support from Nick Raynsford MP, the then Minister for Construction, a Steering Group and a working party developed the Standards and Guidance. They set out the Standards necessary to be adopted by all to achieve best operational practice in the light of differences in the legislation affecting the public and private sectors.

Since publication of the Standards, the Building Control Performance Standards Advisory Group has continued to meet regularly, in order to oversee their implementation, draw up performance indicators and review the effectiveness and currency of those Standards. To this end, a comprehensive consultation and survey was commissioned by ODPM in 2004 both to suggest likely improvements, and to generate suggestions toward the creation of meaningful Performance Indicators reflecting current practices. This updated document is the result of those deliberations.

The Advisory Group considers that it has fulfilled the first part of its remit and that the remaining task of actively monitoring against these standards remains to be addressed.

We commend this updated and expanded document to the attention of all BCBs.

Michael Finn (Chair)
Building Control Performance Standards Advisory Group
June 2006

Introduction

Competition between local authorities and approved inspectors in the provision of building control services throughout England & Wales provides a stimulus to greater efficiency and higher standards of service to the customer. However, these same market forces also have the potential to drive down building control standards, thereby threatening the health and safety of building users. It is to guard against this possibility that Performance Standards were originally formulated.

In March 1998, the Minister for Construction welcomed the setting up by the Construction Industry Council (CIC), the Local Government Association (LGA) and the Association of Consultant Approved Inspectors (ACAI) of a Building Control Services Steering Group to prepare standards, which, taken with suitable monitoring arrangements, would help to ensure that a satisfactory level of building control is achieved.

The resulting document was based on the work of the Steering Group and of the Performance Standards Working Group which it set up. It set out, for the first time, recommended Standards for the performance of building control, to be adopted by all BCBs.

The Standards were supported by Guidance on how they might be achieved, analogous to the functional requirements of the Building Regulations and the Approved Documents supporting them. It was considered that they could also form the basis of any service agreements between BCBs and their clients. The original document has now been reviewed resulting in this new publication, which will be kept under review by the new monitoring body whose terms of reference are to:

- keep under review the effectiveness of the standards and guidance published in the second edition of “Building Control Performance Standards” (June 2006) and make recommendations for revisions of the standards and guidance,
- advise stakeholders on the monitoring and performance of the Building Control Performance Indicators (BCPI) system,
- consider whether and how feedback from the BCPIs should be centrally collected, collated and published,
- consider complaints from building control bodies, other statutory bodies and other parties with an interest in relevant building work, that building control bodies have not acted in accordance with the Building Control Performance Standards; where appropriate, to refer such complaints to relevant other bodies; and/or to make recommendations to the building control bodies concerned on prevention of future non-compliant action, and
- consider how such complaints may influence the setting and monitoring of building control performance standards.

This document relates to the assessment of plans and the inspection of building work in progress and the giving of certificates at completion of work. It also deals with the keeping of adequate records in respect of plans assessment and site inspection.

This document is written against the background of the current provisions of the Building Act and the associated regulations. There are different procedural frameworks applicable to building control by local authorities and by approved inspectors. However, the essential tasks of assessing plans and inspecting work are the same. The Standards and Guidance which follow establish the level of performance considered essential as a minimum in carrying out those tasks in such a way that a BCB's duties and liabilities under the legislation are adequately discharged.

Although the building control process in itself does not guarantee 100% compliant buildings the acid test of effective building control is its success in helping to achieve reasonable standards of health & safety, energy conservation, accessibility and sustainability for building users. Building control does not however remove the obligation of the person carrying out the work to achieve compliance with the Building Regulations, so the construction industry has an enormous part to play. It may be difficult to measure in precise terms the success of building control in helping the industry achieve compliance. However, all BCBs should undertake some form of qualitative analysis, as a basis for continuous improvement and in this connection the Performance Indicators are designed to assist the process.

Standards for Building Control

1. POLICY

Every BCB shall adopt, publish and make available on request, a formal policy for the provision of its building control service in a manner that meets its legal duties and is effective in helping to achieve the compliance of building work with the Building Regulations.

2. RESOURCES

The BCB shall deploy sufficient experienced and qualified staff, appropriate to the type of building control work undertaken.

In the light of current and forecast workloads, sufficient resources should be allocated by the BCB to enable it to discharge its duties with reasonable skill and care and to comply with these Standards. A formal review of resources and staffing shall be regularly undertaken, to address fluctuations in workload, and the results should be documented and made available for audit.

3. CONSULTATION

The BCB shall undertake all statutory consultations in a timely manner and the observations of consultees should be forwarded to clients. It shall consider the possible desirability of undertaking additional consultations. It shall where appropriate co-operate as far as possible in an integrated approach to development consents.

4. ASSESSMENT OF PLANS

Where assessment of plans is undertaken, clear information shall be communicated to the client regarding:

- non-compliance with the Building Regulations
- views of statutory consultees
- conditions pertaining to the approval or passing of plans
- remedies available in the event of a dispute over compliance.

Records of the plans assessment process: records shall be kept of the design assessment philosophy, and any statutory and/or discretionary consultations, for future reference and continuity of control.

5. SITE INSPECTION

Site inspection regime: the BCB shall adopt an appropriate site inspection regime which takes full account of relevant factors such as:

- the degree of detail in the design assessment process
- the nature of the work
- experience of the builder
- complexity and rate of build
- unusual or high risk features
- notification arrangements
- key construction stages.

Relevant factors should be assessed at the outset and regularly reviewed so that effective control is maintained for the duration of each project, with adequate site inspections and records, sufficient to demonstrate the application of reasonable skill and care.

Site inspection records: records of each inspection shall be maintained, which identify the work inspected and any non-compliance. Where plans are not available for the work, these records will necessarily be more detailed.

Contraventions: non-compliant work (contraventions) should be communicated promptly and clearly to the responsible person, identifying the contravention(s) and indicating any measure(s) believed to be necessary to remedy the situation. Any mechanisms for appealing against or disputing a decision of the BCB shall be clearly made known to the responsible person.

Notification of consultees: During the inspection phase, the BCB shall ensure that all statutory consultees are notified of any significant departures from plans.

6. CERTIFICATES AT COMPLETION

Upon satisfactory completion of the relevant work the BCB shall give an appropriate certificate to the direct client and any other appropriate person(s).

7. ARCHIVING OF RECORDS

All records relating to the building control service provided to individual projects shall be retained by the BCB for a minimum period of 15 years. Arrangements shall be made for their transfer into safe keeping in the event of a BCB ceasing to trade.

8. CONTINUING PROFESSIONAL DEVELOPMENT

The BCB shall ensure that suitable arrangements exist for Continuing Professional Development and in-service training of its technical staff.

9. REVIEW OF PERFORMANCE

A BCB shall have methods of collecting and monitoring evidence of its performance, in terms of service delivery and compliance or non-compliance of building work with the Building Regulations. It shall have procedures in place to learn from its findings as a part of a process of continuous improvement. It shall also facilitate the sharing of any information which would be of benefit to BCBs in recognising general areas of difficulty (or failure) in achieving compliance.

10. MANAGEMENT SYSTEMS

Every BCB shall incorporate a formal documented system for consistency of service delivery and continuous improvement, which can demonstrate that the above standards are being addressed.

11. BUSINESS ETHICS

Every BCB shall observe the normal professional standards and business ethics expected of service providers. A BCB shall not attempt to supplant a competitor, or win work, on the basis of interpretation of the regulations. The principle of the building control function being independent shall not be compromised.

12. COMPLAINTS PROCEDURE

A BCB should operate, maintain and make available, on request, to any interested party an appropriate complaints procedure. If a person is dissatisfied with the Building Control service they receive they should be able to complain to the provider in a manner that can be independently audited.

Guidance

The following gives general guidance as well as practical guidance about some of the ways of meeting the requirements set out in the preceding Building Control Performance Standards.

1. POLICY

Compliance with the Standards in this document should be an express object of the policy.

Under the Best Value system, local authorities are required to publish annually local performance plans for all their services. In addition, the March 1998 Enforcement Concordat calls on local authorities to publish clear standards setting out the level of service and performance that the public and businesses can expect to receive.

Approved inspectors are required, as part of the approval and registration process, to agree to abide by the Code of Conduct for Approved Inspectors and are subject to the Disciplinary Procedures of the Construction Industry Council Approved Inspectors Register. This Code in turn requires Approved Inspectors to act fairly and impartially at all times in performing the functions for which they have been engaged and to observe the Building Control Performance Standards.

Further guidance can be found in the District Surveyors Association Level of Service Document and the Construction Industry Council Approved Inspectors Register Code of Conduct for Approved Inspectors.

2. RESOURCES

Sufficient resources should be allocated to carry out that policy. This is to enable reasonable skill and care to be exercised in discharging a BCB's legal duties, and to meet the requirements of the Performance Standards.

The level and complexity of work is highly variable and, therefore, it is not possible to specify the level of resource within this document for individual projects. However, the principles of risk assessment, and experience, coupled with the responsibilities placed by the Standards, will help the BCB to determine the level of expertise and input into individual projects and the overall operation of the BCB. Systems should be capable of demonstrating that this assessment and decision making has occurred.

Project acceptance: for an effective building control service to be provided, the BCB should review and be able to demonstrate its capability or capacity to provide an effective level of resources to either individual or collective projects. The term resources does not necessarily imply permanently retained staff. It also includes flexible staffing arrangements such as the use of suitably experienced and qualified consultants.

In the case of local authorities, which cannot refuse to undertake building control on a project if requested, these procedures should extend to consideration of the possible need to engage additional support, either generally or in relation to individual projects. Where a local authority finds itself regularly under-resourced in respect of its building control function, it should take, and be able to demonstrate that it has taken, all reasonable steps to rectify the situation. An approved inspector should not accept a project unless it can be adequately resourced.

A review or assessment could find expression in a service plan, which could be applied either to individual or collective projects. It could take the form of a formal contract review or periodic assessment of the current and forecast workload.

Resources for existing projects: individual or collective projects should be reviewed on a continuous basis to ensure that resources are being adequately deployed and that an effective level of control is being provided.

3. CONSULTATION

Throughout a project, the BCB shall undertake all the statutory consultations, observing any prescribed time periods. The possible desirability of undertaking consultations beyond the scope of those required by legislation shall be borne in mind. The views of the consultees shall be taken into account by the BCB and any observations or advice beyond the scope of the Building Regulations should be communicated formally to the client.

In the event of significant departures from plans during construction, the BCB shall, where appropriate, inform relevant statutory consultees, and shall take into account their views. This is in addition to carrying out any statutory consultation prior to issuing any notices or certificates.

One stop shop: the principle of minimising the difficulties inherent in developers having to gain a series of consents is recognised, and BCBs, whether in the public or in the private sector, should support a one stop shop approach, so far as they can. The One Stop Shop Approach to Development Consents (DETR April 1998) recommends that where approved inspectors are to be engaged, they should participate in any pre-application discussions where this is likely to be helpful to the client.

Pre-application discussion should normally establish the degree to which a one stop shop approach may be practicable. Achieving this approach will be dependent, to a large extent, on the availability (and willingness) of those involved to devote their time to it, particularly if the personnel involved are dispersed or in remote locations.

Nevertheless, as part of the Performance Standard of the building control service, every effort shall be made both to minimise any hindrance to the developer and to maximise the degree of co-ordination and co-operation which may be achieved in obtaining the necessary consents.

4. ASSESSMENT OF PLANS

The purpose of plan assessment and design appraisal is to assist the process of achieving compliance of building work with the Building Regulations. Accordingly contraventions of Building Regulations identified in drawings should be communicated to the designer. However, there is little to be gained from being unduly pedantic and, in determining the level of plan examination necessary, consideration should be given to the expected frequency and detail of subsequent site inspection.

Where appropriate, a BCB should inform the person intending to carry out work of the availability of the procedure for referring questions of compliance to the Secretary of State (for England) or the Welsh Assembly Government for determination.

A BCB should alert the client to provisions of legislation outside the Building Regulations which it believes are likely to be relevant to the building work in question.

If plans are passed, or approved subject to conditions, or in stages, a schedule should be compiled of the modifications specified by the BCB and/or of the further plans or information required to demonstrate compliance. The information communicated to the client should be clear and unambiguous.

Records of the plans assessment process: to ensure effective and continuing control over the design and executed work certain features should be recorded as appropriate to the work, e.g:

- a. identification of any exempt buildings and work
- b. identification of the type of building work
- c. the intended use of the building, floor area, cubic capacity and number of storeys
- d. in respect of extensions, material alterations or a material change of use to an existing building, relevant data in respect of the original building
- e. the fire resistance requirements, particulars of compartmentation and flame spread classification. Where appropriate the rationale behind the fire safety design check will need recording
- f. the permitted occupancy factor and anticipated maximum occupancy of floors/zones/areas
- g. the accepted floor loading provided for by the designers
- h. details of local hazards, contamination, sewers and services beneath or immediately adjoining the site and any known risk of flooding
- i. details of consultation with the fire authority
- j. details of any other consultation.

Records should be made of any special or unusual circumstances affecting the construction of the building. In particular, a note should be made of any dispensations

from or relaxations of the Building Regulations which were granted or refused, or where significant but none the less acceptable departures are made from the guidance in an Approved Document.

A written opinion should be issued on all proposals submitted for assessment.

5. SITE INSPECTION

The building control process, in order to be effective, requires an inspection regime of appropriate intensity and frequency. However, it is not practicable for every item of work to which the Building Regulations relate to be examined.

Building control staff should use professional skill and judgement in their selection of priorities for inspection within the BCBs stated policy. Work not subject to prior plans appraisal may need to be inspected in more detail than would otherwise be necessary under full plans procedures and, dependent on the complexity of the project, such inspections may need to be carried out by personnel with greater expertise.

The inspection regime considered necessary will thus be dependent on many factors including:

- previous experience
- the extent of prior assessment of plans
- how complicated or relatively straightforward the method of construction is
- whether recent experience indicates current problems in interpreting and/or achieving compliance with certain requirements
- whether the builder is in need of a greater degree of inspection, requested or otherwise
- how serious the consequences of a particular contravention might be
- the impracticability or impossibility of subsequent inspection of hidden work
- speed of build, or methods of fast track construction.

However, subject to the appropriate professional judgement or risk assessment, inspection should normally be made of:

- a. structural elements and components, the failure of which would, in the opinion of the BCB, be significant
- b. all works which, in the opinion of the BCB, constitute unusual designs or methods of construction
- c. work relating to fire safety

- d. any type of work, construction, equipment or material which could, if not verified, cause defects which would, in the opinion of the BCB, be seriously detrimental to the fundamental purposes of the Building Regulations
- e. any additional areas of work necessary for the subsequent issue of a certificate at completion.

Inspection frequency: the most important thing is to have an appropriate inspection plan; the scope and frequency of inspection should be determined, and incorporated in a formal written plan. This plan should be kept under review as the project proceeds. It should take into account the inspection regime factors above.

All sites should be inspected frequently: this is unlikely to be less than 1 visit every 28 days for all live and reasonably active sites, and 3 months maximum for non-active sites to ensure that legal control is maintained.

Inspection notification framework (INF): Without prejudice to the requirements of Building Regulations, every BCB should, as part of the inspection plan and before the commencement of work on site, decide and communicate to the client an INF, taking account of the complexity of the project and other factors. The INF should identify generally the stages or items of work the BCB wishes to be notified of as and when they are ready for inspection.

BCBs should then respond as appropriate to all notifications identified in the INF, to the extent that not to inspect these stages of work should be the exception, not the norm and the reason for non-inspection should be recorded.

NB: it should be made clear to the builder that the BCB would normally expect to carry out unannounced inspections between the stages identified in the INF.

In order to ensure effective communication and building control involvement, requests for inspection should be responded to **within one working day**.

Remote inspection techniques such as the use of photographs, video tapes or live camera transmission should not be relied upon as a complete alternative method of ascertaining the compliance of work on site.

Effective follow up procedures are essential to ensure that previously noted errors have been corrected.

Tests at completion: at completion, certain tests may need to be carried out under building control supervision, as necessary, in order to demonstrate compliance e.g. drainage, air tightness, flue spillage tests. The BCB should consider the need for such tests at the earliest possible stage, include them in the inspection plan, and inform the client of its requirements as far in advance as possible.

Site inspection records: although there is no legislative requirement to retain records, it is considered that in order to effect continuity of control and to provide evidence of building control input into the build process, adequate records should be maintained to show what works were inspected, the results of the inspection and any remedial action considered necessary.

Records should be as specific as circumstances require but should normally include the date, time (where relevant) and location of the work.

Contraventions of Building Regulations should be clearly and promptly communicated in writing, identifying the problem and the measures which may need to be taken to achieve compliance. Decisions regarding Building Regulations compliance, especially formal notices, shall be clearly communicated to the responsible person, observing any statutory time periods.

The BCB should provide the recipient(s) of the decision with details of any remedies available to them in the event of disagreement with interpretation or procedure.

In the event of a Building Regulation dispute, the BCB shall observe any statutory procedures and shall furnish the client with any information regarding available avenues for resolution of the dispute.

6. CERTIFICATES AT COMPLETION

Certificates should always be issued upon satisfactory completion of the work. Approved inspectors should, in any case, give final certificates if satisfied that the work complies with the relevant requirements of the Building Regulations. Local authorities should give completion certificates under the Building Regulations, even if they have not been requested to do so, if, in the words of Regulation 17, they have been able to ascertain, after taking all reasonable steps, that the relevant requirements of the Building Regulations have been satisfied.

A BCB should include in, or send with, the certificate given at completion a statement that on request it can provide to the client a list of all inspections carried out.

7. ARCHIVING OF RECORDS

Records should be retained for an appropriate length of time having regard to the statutory time limits on legal action. This might be considered to be 15 years, but it should be noted that under the Limitation Acts, there is provision for extending the 15 year limit for negligence actions not involving personal injury, where the plaintiff becomes subject to a disability and in cases of fraud, concealment or mistake. For larger schemes it is important and therefore advisable to keep records as long as possible. Records should if necessary be stored electronically or on microfiche, and be available, subject to any copyright, data protection restrictions, or security considerations. These should include as a minimum:

- approved/accepted proposals and design principles
- records of consultations
- records of site inspections
- client design and contractor details
- certificates and notices

8. CONTINUING PROFESSIONAL DEVELOPMENT (CPD)

This may form part of the building control policy statement in 1.

Properly planned and recorded continuing professional/technical training and development is considered essential both to keep abreast of new technology and to instruct and refresh on legislative requirements and their practical interpretation. Where staff are members of professional bodies, their CPD requirements should be adhered to. All technical staff (including temporary appointments) should maintain CPD records acceptable to relevant professional bodies.

9. REVIEW OF PERFORMANCE

The contribution made by the building control service to achieving compliance is difficult to isolate and identify. It cannot be readily assessed from an examination of the finished product.

Building Control Performance Indicators

The Performance Indicators in Appendix 2 are a recommended method of measuring aspects of performance of the Building Control Service and BCBs should be in a position to respond to questions/surveys based on these indicators.

Performance reviews: apart from any independent monitoring of performance, each BCB should, for example as part of its quality management system carry out an annual formal review of performance, and records should be kept of information received and considered at each review, and of the action subsequently taken.

Reviews with other agencies: BCBs should also undertake reviews with other appropriate agencies and bodies, e.g. Fire and other statutory agencies, to help ensure that liaison and consultation procedures are optimised in the best interests of building control clients and building users.

Sharing of information: as the number of BCBs increases, procedures should be developed and followed for the sharing of BCB's information and experience. There is an important potential role here for the Building Control Initiative (BCI) proposed in the May 1998 Memorandum of Understanding formed between the District Surveyors Association and the Association of Consultant Approved Inspectors.

10. MANAGEMENT SYSTEMS

Each BCB should have a properly documented quality management system to ensure that the Performance Standards in this document, and any others contained within the BCB's Policy, are consistently being met.

Recognised systems for corporate bodies include registration under ISO 9001: 2000, the Business Excellence model of the European Foundation for Quality Management, and Total Quality Management. However, a BCB may prefer to adopt a bespoke quality management system.

Whatever system is chosen, it should result in an auditing capability which will serve external scrutiny to establish the extent of achievement of the performance levels as per the Standards in this document, and the steps needed to improve the effectiveness of the BCB's service.

11. BUSINESS ETHICS

Once a client has engaged a BCB for a project or preliminary negotiations are in progress, the professionalism with which that project is handled will be guided by the codes of conduct of the appropriate professional bodies.

It is also very important to the reputation of the building control profession and to the best interests of the construction industry and building users, that competition within the private sector of building control, and between approved inspectors and local authorities, should be conducted in a transparent manner.

The CIC Code of Conduct for Approved Inspectors and the Code of Practice for Members of the ACAI address this aspect, as well as dealing with the proper conduct of building control projects.

A guiding principle in the CIC Code of Conduct is that an approved inspector or consultant employed by him should not attempt to injure the professional reputation of another approved inspector, or attempt to supplant another approved inspector who has already been engaged by a client. The same principle should apply to relations between approved inspectors and local authorities.

The ability of local authorities to offer a client a one stop shop for development consents should not be misused e.g. by making use of privileged information from planning sources to attempt to undertake building control. Similar considerations apply where a BCB can offer additional services.

As local authorities have a wide range of regulatory functions, they should be careful not to do anything that might make prospective clients feel under pressure to use their building control services.

12. COMPLAINTS PROCEDURE

A BCB should operate, maintain and make available, on request, to any interested party an appropriate complaints procedure.

A complaints procedure is considered appropriate if it contains a clearly defined written process for dealing effectively with written and verbal complaints and includes:

- a time scales for acknowledging and responding to a complaint
- b providing the name and contact details of the person dealing with the complaint
- c the procedure adopted for investigating complaints about individuals or service delivery

- d provision for monitoring the progress of the complaint
- e a record of the process for any subsequent independent audit which should be archived for not less than 5 years
- f advice on action available if a complainant is not satisfied with the response. This should include reference to a named independent person or organisation
- g a mechanism for reviewing complaints to improve procedures and prevent re-occurrence in accordance with Standards 9 and 12.

Complaints made verbally are no less important than those made in writing and the complaints procedure should also incorporate the action to be taken in respect of a verbal complaint.

APPENDIX 1

Building Control Performance Standards Advisory Group

TERMS OF REFERENCE

The Advisory Group shall:

- keep under review the effectiveness of the standards and guidance published in the second edition of “Building Control Performance Standards” (June 2006) and make recommendations for revisions of the standards and guidance,
- advise stakeholders on the monitoring and performance of the Building Control Performance Indicators (BCPI) system,
- consider whether and how feedback from the BCPIs should be centrally collected, collated and published,
- consider complaints from building control bodies, other statutory bodies and other parties with an interest in relevant building work, that building control bodies have not acted in accordance with the Building Control Performance Standards; where appropriate, to refer such complaints to relevant other bodies; and/or to make recommendations to the building control bodies concerned on prevention of future non-compliant action, and
- consider how such complaints may influence the setting and monitoring of building control performance standards.

Membership

Association of Consultant Approved Inspectors	(ACAI)
Building Regulations Advisory Committee	(BRAC)
Construction Industry Council	(CIC)
LABC	(representing local authority building control)
Local Government Association	(LGA)
Chair	(Independent)
Department for Communities & Local Government (Observer)	(DCLG)
Welsh Assembly Government (Observer)	(WAG)

The ACAI aims to further the development and understanding of private sector building control with the industry and general public. The Association is committed to maintaining appropriate codes of conduct and high professional standards commensurate with the functions of Approved Inspectors, as detailed in the Building Act 1984 and the Building Control Performance Standards.

The CIC is the 'designated body' for the Department for Communities & Local Government Secretary of State for appointing Approved Inspectors under 'The Building (Approved Inspectors etc.) Regulations' and their Amendments. Approved Inspectors are the private sector parallel of Local Authorities' Building Control Officers. CIC act as the designated body through the Construction Industry Council Approved Inspectors Register Management Board.

LABC represents 370 local authorities throughout England, Wales and Northern Ireland with an aim to ensure that buildings attain at least the required standards of legislation covering constructional health and safety, access and sustainability. This is delivered by promoting, supporting and enhancing Local Authority Building Control within the public sector.

The LGA is a lobbying and member organisation, representing just over 500 local authorities in England and Wales, promoting better local government and providing the national voice for local communities. Its members represent over 53 million people, employ more than 2.25 million staff and spend nearly £84 billion on local services.

APPENDIX 2

Building Control Performance Indicators

MAIN OBJECTIVES

The seven indicators summarised below will:

- assist building control bodies to assess their own service quality in pursuance of Standard 9; and
- give those with a central responsibility or concern for the quality of building control a means of identifying building control bodies whose service characteristics appeared unusually good or poor.

Summary of Building Control Indicators

BC1 – Score against a checklist of best practice for building control services.

BC2 – Fire Authority perceptions of the value added by Building Control.

BC3 – Qualified or experienced staff as a percentage of the total staff employed by the Building Control Service.

BC4 – Average number of hours of training provided per annum by the Building Control Body a) per qualified or experienced member of staff b) per non-qualified member of staff.

BC5 – Average number of hours on-site a) planned and b) completed, for each category of residential and non-domestic work.

BC6 – Percentage of projects reaching a satisfactory conclusion measured for local authorities as the percentage of certificates issued as a proportion of projects started, and for approved inspectors as the percentage of projects started which reach satisfactory completion in that they do not revert back to the local authority.

BC7 – Percentage of a) residential customers and b) non-domestic customers who are satisfied with the service they received from the Building Control body in terms of:

- Added value to the finished product
- Being helpful and responsive to needs
- Applying the Building Regulations professionally
- The overall service

Reference

The Building Control Performance Indicators spreadsheet and guidance can be downloaded by visiting the Planning Portal (Professional User Building Regulations area) website www.planningportal.gov.uk or the Building Regulations area of the Department for Communities & Local Government website www.communities.gov.uk.
