

# COVID-19 response and restart of NHS services

## 1 Introduction

The NHS across Kent and Medway is working as one to respond to the pandemic and will continue to do so through the restart phase of work. The NHS is also a key partner on the Kent Resilience Forum response for COVID-19 and continues to be actively involved in the recovery cells of the KRF.

The impact of COVID-19 on the people of Kent and Medway is a tragedy. At the time of writing this report, deaths from COVID-19 were 1,319 in Kent and 188 in Medway. This is the figure using ONS data published on 7 July for deaths in all settings including care homes. Whilst there has been a downward trend in the number of infections and deaths since May 2020 local people are still getting seriously ill and dying from COVID-19.

The number of people affected by COVID-19, in terms of physical and mental wellbeing, is also far greater than those who have needed hospital treatment and those who have sadly died.

- The isolation of lockdown and the impact of unemployment means we expect more people to need support from mental health services in the months ahead.
- The physical health of people who have been unable or unwilling to access NHS services during the April/May peak of the pandemic will have worsened.

Page | 1

The local NHS is now focussed on three overarching issues:

- Ensuring there is sufficient capacity to care for people who continue to be infected with COVID-19
- Restart non-COVID-19 services
- Meet the increased demand across rehabilitation and mental health services for those affected by COVID-19 either directly or indirectly.

In addressing all three of these areas we must consider the evidence of health inequalities and how specific groups within our local population have been disproportionately affected by the virus.

## 2 Recovery of NHS services – national priorities

On 29 April 2020, NHS England and NHS Improvement (NHSE/I) set out priority issues that the NHS needed to address as part of continuing to provide an effective response to the pandemic and restoring wider NHS services that were temporarily suspended or reduced whilst the April/May peak was managed.

There are 34 specific requirements across hospital, primary care, community and mental health services. The scope of the individual requirements varies considerably.

Key requirements include:

- Return urgent and routine referrals to secondary care to pre-COVID-19 levels
- Return urgent and time critical treatment to pre-COVID-19 levels
- Restart routine elective care services

- Catch-up on backlogs in screening programmes
- Introduce increased clinical support in care homes
- Establish open-access crisis services for mental health
- Maintain delivery of telephone/online consultations.

Kent and Medway's NHS is progressing well against the requirements and there is intensive work across all parts of the NHS to restart services. Challenging areas at present include screening programmes where capacity for bowel screening is limited for clearing backlogs and refurbishment work is needed to make mobile breast screening units COVID-19 safe.

Cancer diagnostics have all restarted and work is underway to clear backlogs. Treatment for cancers including chemotherapy, radiotherapy and surgery are expected to be back to pre-COVID levels by September 2020.

Care homes continue to receive extra clinical support. There are arrangements in place for 100 per cent of all care homes that includes for each care home a weekly ward round, a named clinician, a named coordinator, a process for medication reviews and a process for anticipatory care plans. Further work is underway to improve digital solutions to giving care homes access to clinical advice through video and online consultations.

A summary of the 34 requirements is included as appendix 2 of this report.

### **3 Restarting services whilst COVID-19 is still circulating**

COVID-19 has not gone away and two key areas of focus for the NHS are to:

- ensure we keep sufficient capacity across Kent and Medway to support those patients who continue to need specialist care to treat the virus.
- be ready to respond if infection rates start to rise again.

If a second peak does happen we must tackle it without the same disruption to other services that occurred in preparing for and managing the April/May peak.

This does mean that clinical staff and beds will continue to be dedicated to COVID-19 care and therefore impacts on our ability to fully restore other services.

In addition to continuing to provide services for COVID-19 patients, like other employers and organisations, the NHS must implement a range of social distancing national requirement to help limit the spread of the virus and protect our staff and people visiting our services. The key requirements are:

- greater distancing between people in waiting areas, wards, communal space and offices
- more frequent and in-depth cleaning of sites.

The impact of these requirements varies across different locations, with our older and smaller premises most affected. It reduces both the number of patients we can accommodate and the speed people can be seen; and therefore also impacts on our ability to fully restore services.

COVID-19 is likely to remain a health problem until an effective vaccine is developed and administered to a significant proportion of the population.

## **4 Potential timeline for full recovery**

The restoration of all health services to pre-pandemic levels is complex and constrained by the issues noted above. It will take time and we must ask the people of Kent and Medway and the Committee to bear with us and work with us. Our restart work will be phased and prioritised but we expect it to take into 2021/22 to fully recover for all non-urgent services. The speed of the recovery will also critically depend on whether we see further peaks in infections; which is to a large extent dependent on how everyone living and working in Kent and Medway behaves in terms of respecting the rules on social distancing and maintaining good hygiene practices.

## **5 Maintaining benefits from new ways of working**

Whilst the pandemic has had a terrible impact on so many people, we believe that a range of new ways of working which the NHS had to introduced in response to the pandemic have benefitted patients and our teams. Where this benefit can be maintained we will be looking to retain these new ways of working as normal practice in the future. The clearest example has been the rapid increase in the use of telephone and video consultations across primary, community, hospital and mental health services. Maintaining high levels of phone and video consultation are specific requirements set out in the national priorities for NHS recovery.

However, we recognise that telephone/video consultations will not be right for some people and some types of appointment. They would not replace the ability to see a clinician face to face but they are offering more convenience and flexibility for people and reducing the need for people to travel to healthcare settings.

With any plans for restart that may involve adopting new ways of working we will be considering patient and public engagement requirements to ensure the views of local people have shaped our plans.

## **6 Informing and involving patient and the public in our restart programme**

Making sure that we keep patients and the public informed about progress and involved in any services change that is proposed as part of the restart programme is important to us. The restart programme includes a dedicated communications and engagement workstream which will ensure:

- a broad and diverse range of stakeholders are informed about progress to restart services
- where changes are being considered there is active patient and public involvement in designing/reviewing those changes
- statutory requirements to engage and consult are met where required
- targeted communications and engagement campaigns are delivered to help local people continue to protect themselves and the NHS from COVID-19.

During June we ran public and staff surveys and conducted a series of interviews and discussions to capture experiences during the lockdown and peak of infections. We asked for feedback both on the experience of using NHS services during the pandemic and where people were unable to or chose not to use NHS services.

Over 2,100 people responded to our public survey and nearly 700 NHS staff responded to a separate survey. 45 focused interviews were also carried out. The feedback is being analysed during July and will be used to support the restart programme to:

- understand levels of support for the new ways of working such as telephone/online consultations

- plan communications campaigns and further engagement work with local people to help them protect themselves and support the NHS in restoring services safely and effectively
- identify ways that we could better support local people if infection rates start to rise again.

## **7 Continuing to engage the Committee**

We welcome the Committee's view on how frequently the committee would like to receive general updates on the NHS restart programme.

We will share, through the HASC chair/secretariat, stakeholder briefings and formal progress reports which are presented to the KMCCG Governing Body and local Trust Board meetings.

### **Wilf Williams**

Accountable Officer – Kent and Medway CCG

SRO for Transforming Health and Social Care in Kent and Medway

# Medway and Swale ICP restart and recovery

## Priorities

In line with national requirements, the restart priorities of the Medway and Swale ICP are:

- Urgent and emergency care
- Elective care
- Discharge
- Local and primary care.

We are working with colleagues across Kent and Medway as well as within our local health and care system to ensure we are able to progress plans as quickly as possible while maintaining sufficient capacity to care for people who continue to be infected with COVID-19, particularly being conscious of a possible second wave, as well as preparing for the pressures that winter brings.

## Urgent and local care

The main driver for the urgent and emergency care workstream is to work together as system partners to provide patients with a service which is responsive to meeting the emergency care standards in an environment which meets new infection control measures. The ambulance service, Medway NHS Foundation Trust, Medway Community Healthcare, mental health, social care and the CCG are working closely.

The key workstreams to support pathways ensure patients are seen by the right team are:

- **Direct Access Booking from 111** into the emergency department, same day emergency care and the urgent treatment centre. We are working to introduce direct access booking into Medway NHS Foundation Trust by September 2020.
- **Direct communication between paramedics and ED consultants.** We are exploring the use of a digital solution for paramedics to dial in to gain consultant advice on whether the patient needs to be directed to ED or an alternative urgent care environment.
- **Maintaining improved flow of hospital beds while adhering to infection prevention and control regulations.**

## Elective care

The focus for the elective care workstream has been to restore elective services for patients at both Medway Maritime Hospital and independent sector hospitals so patients can confidently attend clinic appointments, attend their diagnostic procedures and be admitted for elective surgery.

Collectively the teams have worked together undertaking risk assessments, redesigning pathways, changing working patterns and set patient wayfinders to services throughout the hospital. Under the guidance of clinical, quality and infection control measures patients can now attend outpatients, diagnostics and attend for surgery within the acute hospital.

**Outpatient appointments** during the coronavirus pandemic Medway NHS Foundation Trust introduced a virtual outpatient appointment process to enable patients, where appropriate, to continue to have their outpatient appointments with the clinical teams. Since the end of June, following completion of all necessary changes within the outpatient department areas, patients have attended face to face appointments. Marshalls at the front entrance of the hospital and in clinical areas welcome and signpost patients, minimising crossover of patients and staff walking around the hospital. Additionally extra capacity has been created outside of the hospital to hold outpatient appointments for some specialties where required.

**Diagnostics** – Medway NHS Foundation Trust has restarted all diagnostic and imaging services for elective patients.

**Inpatient and daycase surgery** – following advice and adhering to strict guidelines to ensure safety for patients and staff, Medway NHS Foundation Trust restored its inpatient and day surgery theatres at the end of June.

## How we are restarting services safely

In order to restore and recover services safely, we have taken account of the need to maintain social distancing. To mitigate the impact of this on how we see patients we have implemented 'green and red' pathways in the hospital. Green pathways are for those patients who have been swabbed and confirmed to not have COVID-19, while red pathways are for patients who haven't been swabbed and are either possible or definite COVID-19 cases. This must be taken into account due to the need for distancing in the hospital and therefore we have had to adjust to our capacity.

We are pleased to report that 100 per cent of all urgent and emergency care pathways are already open. For elective care we are at 100 per cent of all service reopen already, but we are operating at 86 per cent of the previous capacity due to distancing in outpatient settings. For cancer, all services are up and running.

## Discharge process

During the coronavirus pandemic a discharge team was brought together to provide strategic, system, operational and regional leadership across health and social care. This team enabled has worked together to ensure patients are safely and quickly discharged when they are medically fit for discharge.

The process is robust and has continued to be managed seven days a week since March 2020. The team is now working to embed the new model for discharge processes to ensure continuity and a sustainable model for the future.

## Local and primary care

The Medway and Swale Local and Primary Care teams are focused on six areas:

1. Early cancer diagnosis
2. Population Health Management
3. Meeting health inequalities
4. Improve access to services for patients
5. Supporting the development of Primary Care Networks

6. Early cancer diagnosis
7. Population Health Management
8. Meeting health inequalities
9. Improve access to services for patients
10. Supporting the development of Primary Care Networks
11. Working together to make sure services reach homeless people and harder to reach communities.

## Planning for winter

The Trust and the wider ICP have embarked on our winter planning process. This is earlier than last year reflecting the importance of aligning our COVID-19 response plans to the wider winter planning process. This year the Trust has appointed a strategic commander who will lead the system winter planning. We will be working closely with the ICP and all our partners in establishing a full system winter plan which covers the requirements for COVID-19 Wave 2 planning, EU exit planning and winter surge planning.

We are currently in the design phase of our winter plan, with an intention to have a first draft plan for winter resilience, surge, Covid-19 Wave2 and EU exit by the start of September.

## Engaging with stakeholders

At a local level we will continue to engage with patients and our communities as our restart plans are implemented, and will keep the HASC briefed on progress.
